OSU Plastics to Fuel

We use a process called pyrolysis to convert waste plastic into diesel like fuel!

Plastics to Fuel is a patented technology that breaks down plastic into hydrocarbons. The process is called pyrolysis. It's a clean, efficient way to recycle plastic waste. The resulting fuel can be used in a variety of applications, from power generation to transportation. The process is scalable and can be used to process a wide range of plastic waste.

More info about pyrolysis: www.plasticstofuel.com
