

INTRODUCTION

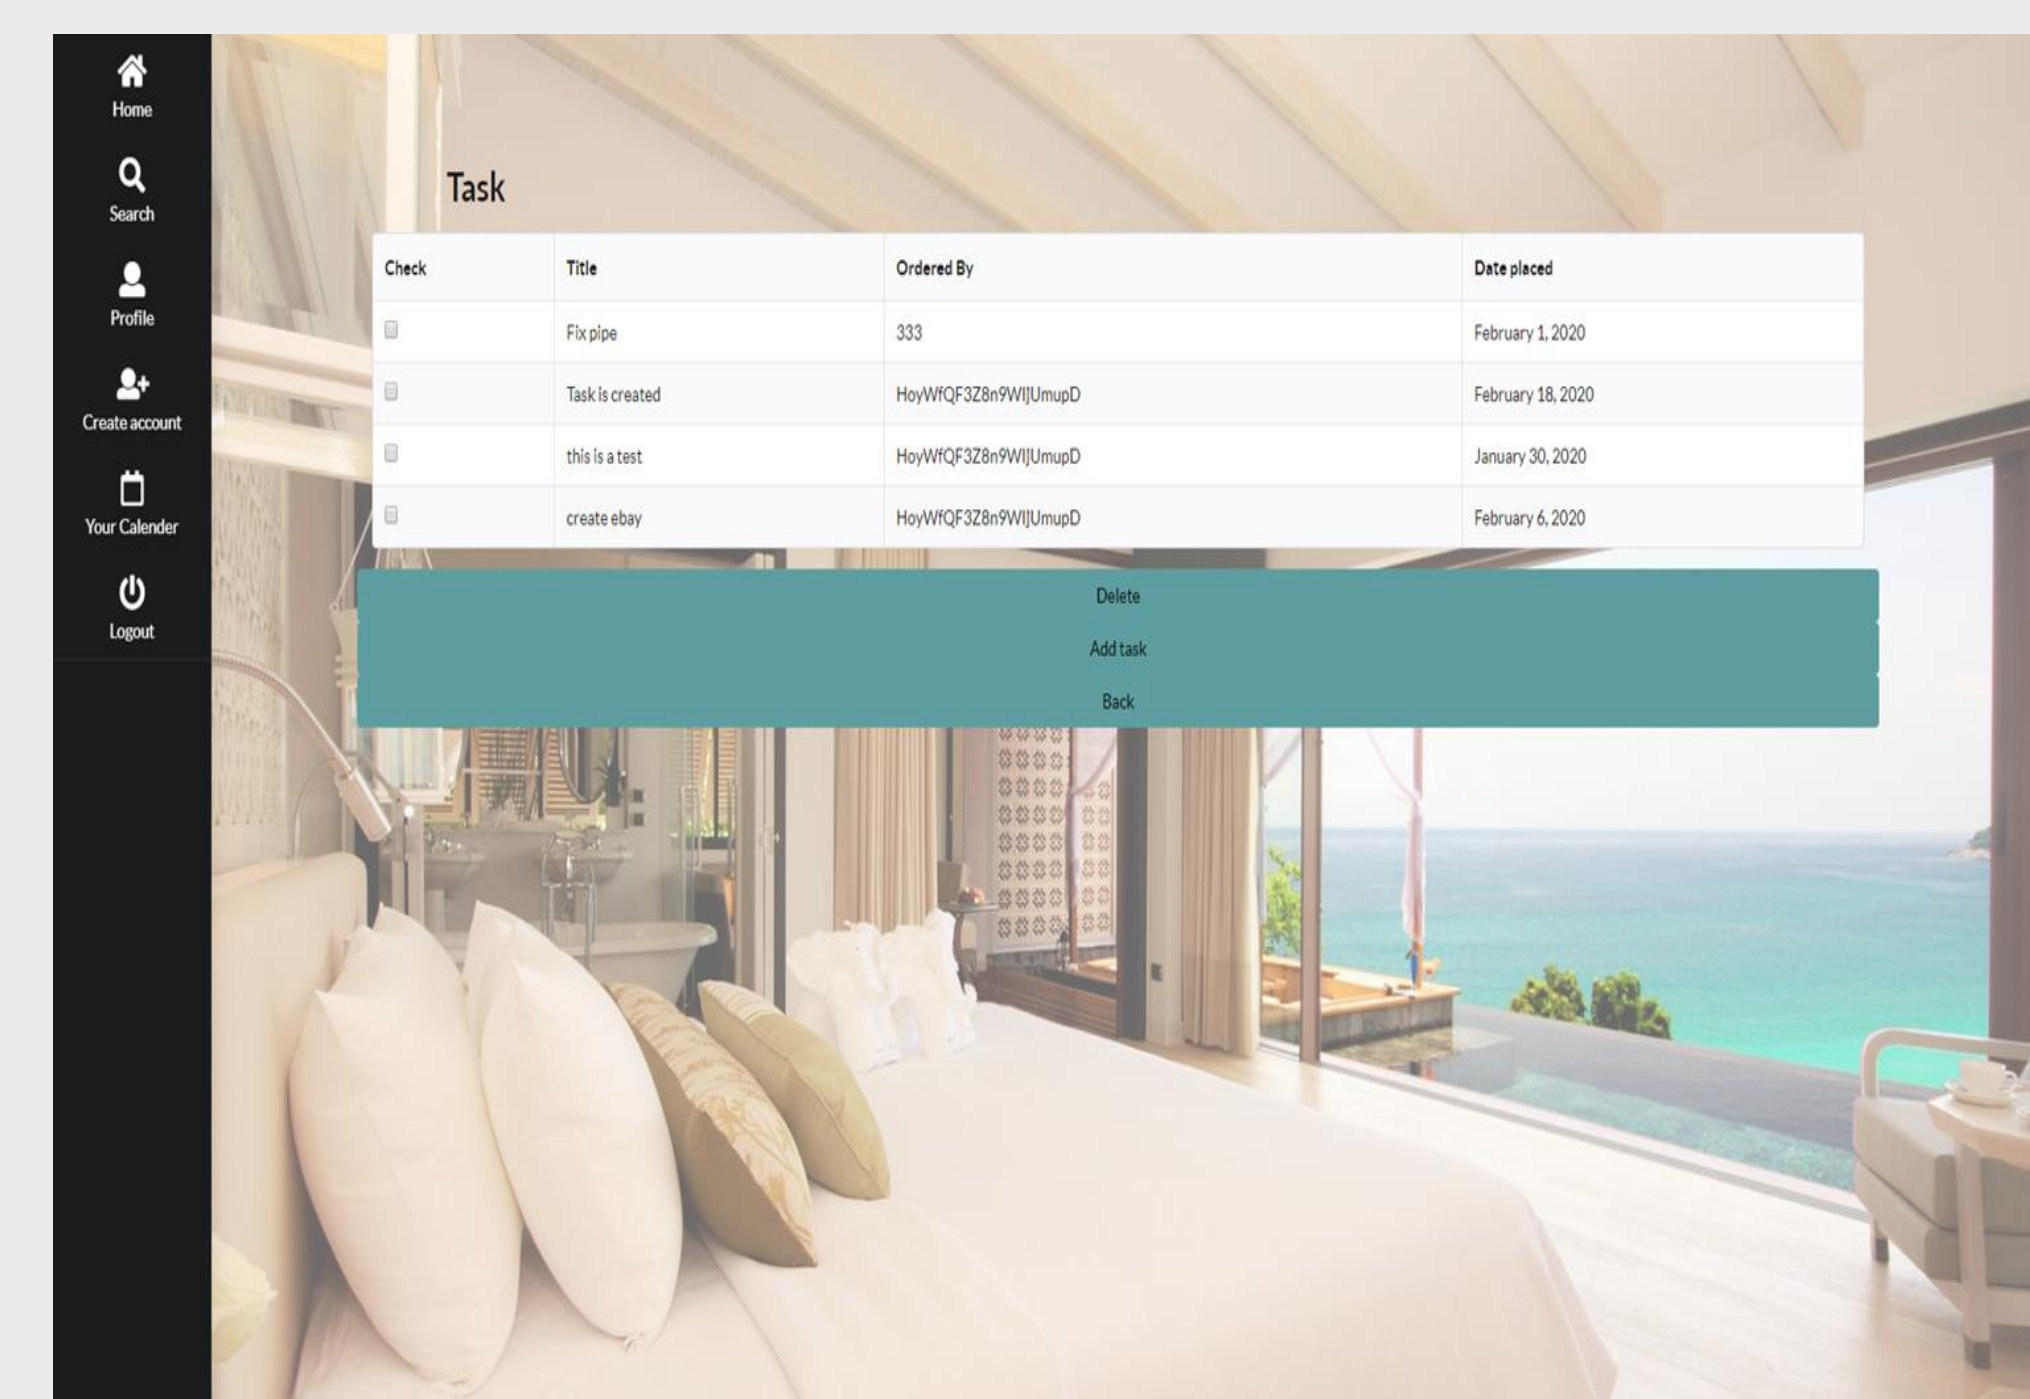

- Going Rogue Design, LLC. Is a commercial land development and construction company founded as a startup by Oregon State graduates
- As the client base grows and operations become more complex, a new management system is needed to keep track of the projects and their related documents.
- Our Going Rogue Model provides clients and a support staff with an intuitive and effective means of creating and updating projects with ease.

# GOING ROGUE PROJECT MANAGEMENT SYSTEM

An iOS and desktop web interface system to complete construction projects

1.a. The Home Page view once logged in.

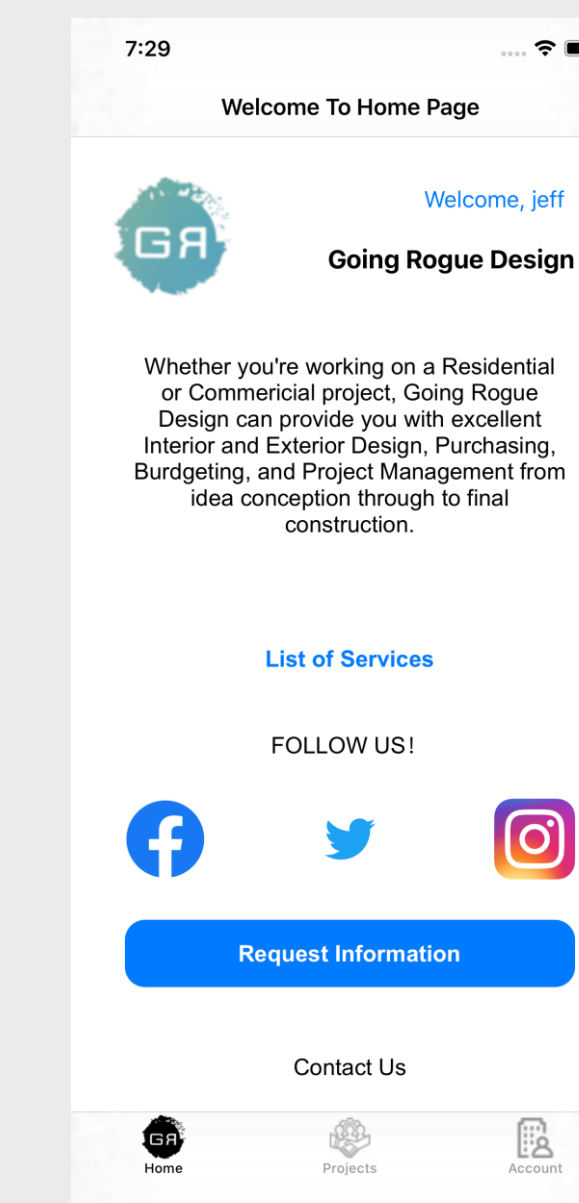

2.a. A collection of documents for a project

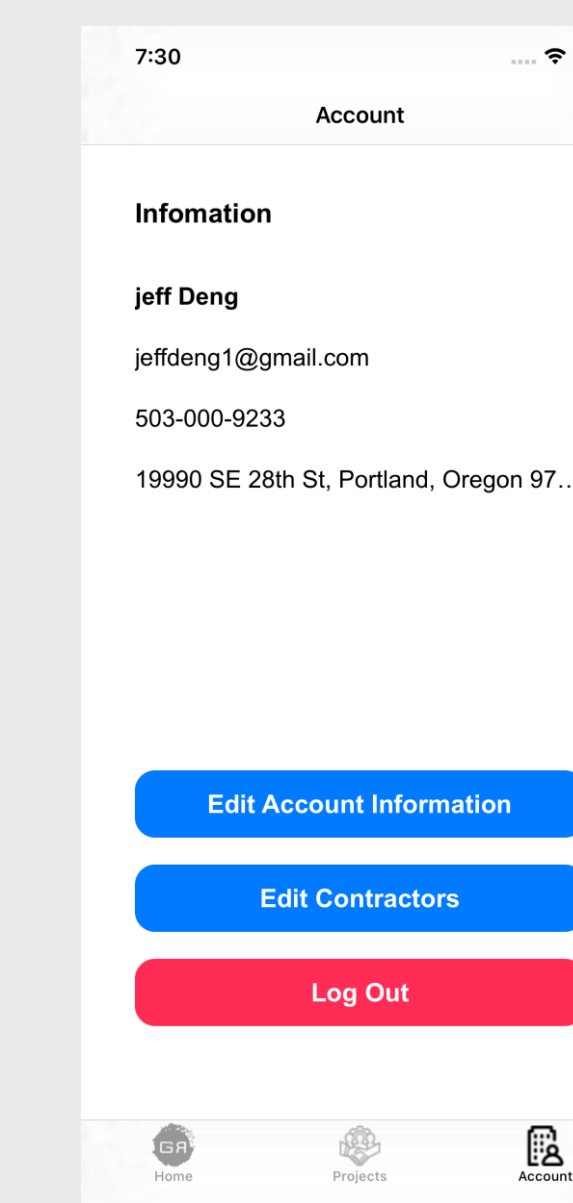

## DESKTOP WEB

The Web interface was designed using Javascript XML from the ReactJS framework, and Google Firebase for the backend.

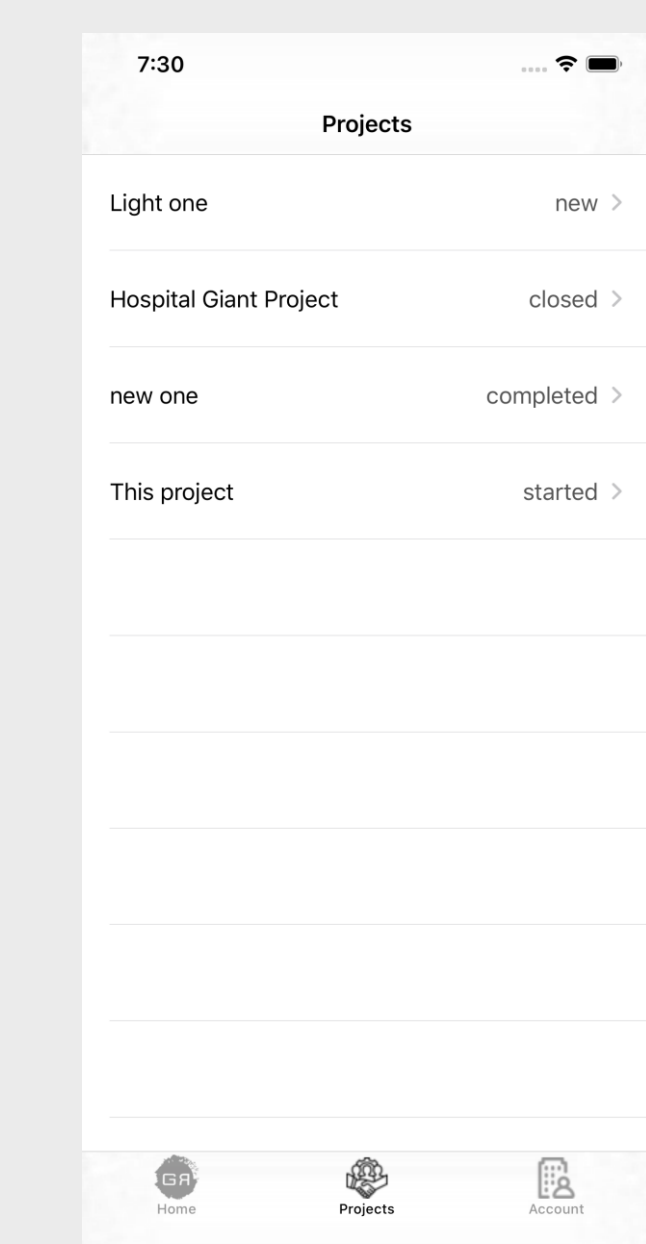

Firebase was chosen as a non-SQL database. Because construction projects are multi-faceted and are often slow to update, reads and refreshes are more important than writes.

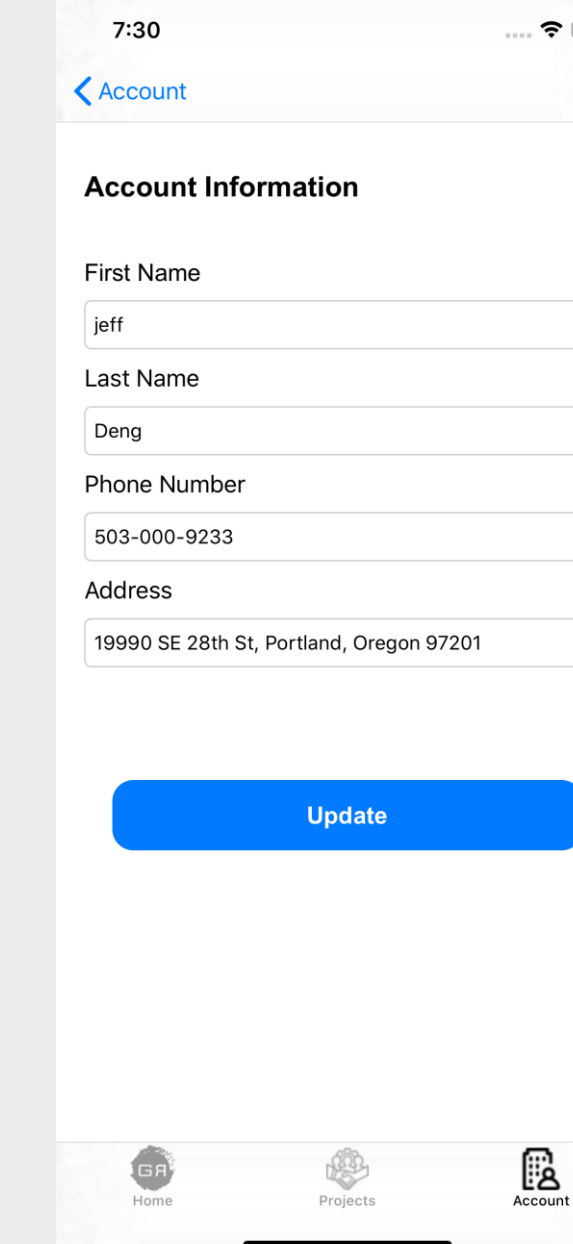

1.b. Before logging in

3.b. Accounts Page

2.b. Project View

4.b. Edit Account Info

## IOS & ANDROID MOBILE APPS

The iOS interface was designed using Swift and Xcode storyboards for their specialization in iOS development.

The Android interface was designed using Java, as is standard for app development on such devices.

THE TEAM

- Lim Cheng Qing
- Yuanjin Zhang
- Dianxiong (Ben) Zhang
- Hao (Jeff) Deng
- Robert Hudspeth
- Shize Yuan
