

Oregon State University

Techno-Economic Analysis of a Proposed Nuclear Renewable Hybrid Energy System in Nome, AK

Lucia, Stephanie, Logan, Brandon

Advisors: Dr. Anthony Alberti, Dr. Jordan Cox (NREL)

COLLEGE OF ENGINEERING

School of Nuclear Science and Engineering

Nome's Energy Status^{1,2}

- Isolated microgrid
- Energy resources
 - 2.7 MW wind
 - 5.2 MW diesel
 - Potential 2 MW geothermal
 - Potential 5-10 MW nuclear
- Energy demand
 - 6 MW peak
 - 4 MW average

Alaska map³

2019-20 Nome Energy Statistics⁴

| Diesel Generated & Purchased [kWh] | Non-Diesel Generated & Purchased [kWh] | Total [kWh] |
|---------------------------------------|---|-------------|
| 29,374,743 | 2,186,915 | 31,561,658 |

| Annual Fuel Costs | Annual Non-Fuel Costs | Total |
|-------------------|-----------------------|--------------|
| \$4,512,210 | \$7,081,890 | \$11,594,100 |

Energy Costs in Perspective

- Residential rate⁴: 41¢/kWh
- Power Cost Equalization (PCE) rate⁴: 19¢/kWh
- PCE Subsidy: 22¢/kWh
- Alaska Housing Finance Corp⁵:
 - Nome, AK average annual energy cost 2.78x national average, 1.81x Alaska avg.

Levelized cost of Energy Comparison⁶

Levelized Cost of Energy Comparison—Unsubsidized Analysis Selected renewable energy generation technologies are cost-competitive with conventional generation technologies under certain circumstances \$150 \$227 Solar PV-Rooftop Residential \$179 Solar PV-Rooftop C&I \$74 Solar PV-Community \$63 \$94 Solar PV-Crystalline Utility Scale \$31 \$42 Renewable Energy Solar PV-Thin Film Utility Scale \$38 \$29 Solar Thermal Tower with Storage \$126 \$156 Geothermal \$59 \$101 \$54 **\$86**⁽²⁾ Wind \$26 Gas Peaking \$151 \$198 Nuclear \$29⁽⁵⁾ \$129 \$198 Conventional (6) \$41(5) Coal \$159 \$65 Gas Combined Cycle \$28(5) \$44 \$73 🔶 \$88(7) \$127⁽⁸⁾ \$0 \$25 \$50 \$75 \$100 \$150 \$175 \$200 \$225 \$250 \$275 \$125 Levelized Cost (\$/MWh)

Motivation

- Find cheaper energy options for Nome
- Advanced nuclear needs to prove its economic competitiveness^{7,8}
- Replace existing diesel with advanced nuclear
 - CO₂ emission goals
 - Nuclear-renewable hybrid energy systems (NRHESs)

Design Objective

- Determine if an NRHES deployed within an existing microgrid in Nome, Alaska is economically competitive with current fossil fuel-based energy generation technologies.
 - If not, determine how economic indicators must change in order for the NHRES to become viable.

Technical Approach

To achieve the objectives of the Techno Economic Analysis, two types of software will be utilized: Renewable Energy Integration and Optimization (REopt), and System Advisor Module (SAM).

REopt:

- Estimate of the Size (MW)
- Dispatch Strategy of the Chosen Technologies

SAM:

 Key economic figures of merit such as Net Present Value(NPV), Levelized Cost Of Energy(LCOE), and internal rate of return(IRR)

Technical Approach (cont.)

$$NPV = \sum_{i=0}^{N} \frac{R_i}{(1+d)^i}$$

 $LCOE = \frac{Sum \ of \ costs \ over \ plants \ lifetime}{Sum \ of \ electrical \ energy \ generated \ over \ plant \ lifetime}$

d=discount rate, R=net cash flow

IRR= annual growth rate for investment

Oregon State University College of Engineering

Mock Excel Inputs

| Inputs | Nuclear |
|--------------------------------------|--------------|
| Size | 1 |
| Capacity Factor | 0.92 |
| OCC | 6200 |
| Fixed O&M | 101 |
| Variable O&M | 2 |
| Fuel Costs | 7 |
| Wholesale Electricity Price | 60 |
| Discount Rate | 0.04 |
| Plant Lifetime | 80 |
| Outputs | |
| Capital Cost (C_o) | -\$6,200,000 |
| Year One Cash Flo | w |
| Year One Power Production | 8059.2 |
| Year One Income | \$483,552 |
| Year One Fixed Expenditures | -\$101 |
| Year One Variable Expenditures | -\$16,118.40 |
| Year One Fuel Expenditures | -\$56,414.40 |
| Year One Net Cash Flow | \$410,918 |
| NPV (Capital Cost * SUM of years) | -\$4,708,410 |
| Payback Period | 42 |
| Internal Rate of Return | |
| LCOE | 82 |

REopt

- Solar
- Wind
- Wind & Diesel
- Wind, Diesel, Battery
- Nuclear

| Site Location | - | Bethel, AK | |
|------------------------------|---------------------|-------------------|--|
| Analysis Focus | Financial/Resilence | Financial | |
| Annual Energy Cost | \$/kWh | 0.22 | |
| Demand Cost | \$/kW/month | 10 | |
| Net Metering Size Limit | kW | 0.1 | |
| Type of Building Simulated | - | Midrise Apartment | |
| Annual Energy Consumption | kWh | 32475000 | |
| Load Adjustment | % | 110 | |
| Adjusted Energy Consumption | kWh | 36019500 | |
| Discount Rate | % | 2 | |
| Electricity Escalation Rate | % | 2 | |
| Annual Grid Emissions Factor | lbs CO2/ kWh | 1.11 | |
| Solar Inputs | | | |
| System Capital Cost | \$/kW | 2400 | |
| Outputs | | | |
| Estimated Solar Size | kW | 10158 | |
| Potential Life Savings | \$ | 9,345,868 | |

Load Profile⁹

REopt Preliminary Results - Solar only

Preliminary Results - Solar (2%)

REopt Preliminary Results - Wind only

Next Steps

- Adjust the load profile to best fit Nome's.
- Combine the different renewables as well as nuclear into the REopt runs.
- Carry over REopt results and input into SAM.

Conclusion

- Noticeable trends between the discount rate and the life savings and size.
- A successful project will demonstrate that an NRHES is viable or the change needed in economic indicators for viability to occur.
- This work is important for the future of nuclear energy and for helping communities afford clean energy.
